OVERVIEW:

- Having spent more than a decade in software engineering and technology leadership roles, I understand the varied needs of organizations across multiple industries and have learned a thing or two about how robust software architecture and user-centered design enable business success. User experience has always been central to my development methodology.
- I most recently worked as a Senior Software Developer where I lead technical initiatives and architect scalable solutions using modern technologies like C#, React, and SQL. I am passionate about building strong cross-functional relationships across engineering, product, and business teams. I have a proven track record of leading strategic software projects that deliver value.
- Previously, I have held roles across diverse technology environments, from enterprise insurance applications to life science SaaS platforms, spanning full-stack development, legacy system modernization, and technical leadership. I have continuously evolved my expertise from traditional web development to modern cloud-native architectures.

EMPLOYMENT:

Sr. Software Developer

January 2017 to June 2025

Arxspan / Bruker, Southborough and Billerica, Massachusetts

- Design and code new applications and components as leading role in a small team using C#, React, and SQL and related technologies.
- Maintain and modify existing applications written in Classic ASP, JavaScript, Python, and PHP.
- Leading internal projects including SAML SSO integration, automated testing, bulk record processing, 3rd party API integrations, and many other smaller projects.
- Configure and run deployments in Kubernetes, manage and develop CI/CD in Azure DevOps.
- Collaborate cross-functionally with other engineers, project managers, business users, and customers to achieve elegant solutions.

Sr. Application Developer

February 2013 to January 2017

The Hanover Insurance Company, Worcester, Massachusetts

- Delivered enterprise RESTful web applications on Java EE with Spring and Hibernate; designed clear APIs and modular components.
- Helped lead the organization's transition to Git by defining branching and pull-request workflows, enabling code reviews, and improving release discipline.
- Improved performance and reliability by profiling hotspots, optimizing Hibernate/SQL access patterns, and strengthening logging and monitoring.
- Contributed to Maven-based build automation to increase consistency and predictability of releases.
- Mentored teammates and championed engineering standards, code quality, and best practices.

Sr. Technical Analyst

November 2008 to February 2013

EBSCO Publishing, Ipswich, Massachusetts

- Developed applications to manage internal workflows as leader of a two person team using Spring MVC, Hibernate, JUnit, JSP, Bootstrap, JQuery and HTML5.
- Developed web application to facilitate outside content review using PHP, MySQL, and JavaScript.
- Wrote many smaller applications, software extensions, maintained legacy applications, managed application servers and wrote reports using appropriate technologies.
- Took the lead where discussions involve consensus.

Software Developer

March 2006 to September 2008

Compex Integrated Systems, Worcester, Massachusetts

- Developed and tested database software for a manufacturing environment.
- Worked with clients to deliver custom software to their specifications.

Music Director / Technical Support

July 2005 to May 2008

WSCW Radio, Worcester, Massachusetts

- Operated and helped manage the on campus radio station.
- Managed all station equipment and software, including all necessary repairs.
- Training student disk jockeys on equipment operation.
- Tracked albums with promotion companies and record labels.

Automated Clearing House Coordinator

June 2006 to November 2008

Commerce Bank & Trust, Worcester, Massachusetts

- Worked with highly sensitive and accurate information.
- Wrote VBA scripts to automate Excel work.

EDUCATION:

Bachelor of Science - Computer Science

May 2008

Worcester State College, Worcester, Massachusetts
